'future self' by rAndom international

rAndom international: future self

[MADE space](#), berlin

on now until june 3rd, 2012

'future self' is the newest performative installation by london-based collection [rAndom international](#), presented for the first time in a collaboration with wayne mcgregor who choreographed a new piece for the production and accompanied by a score written by max richter composed in relation to the structure of light. arranged specifically for the exhibition's opening, two dancers took to the 'stage' physically communicating with one another as well as with their own reflections through the

sculptural monolith which measures 1200 x 1500 x 3450 mm in dimension

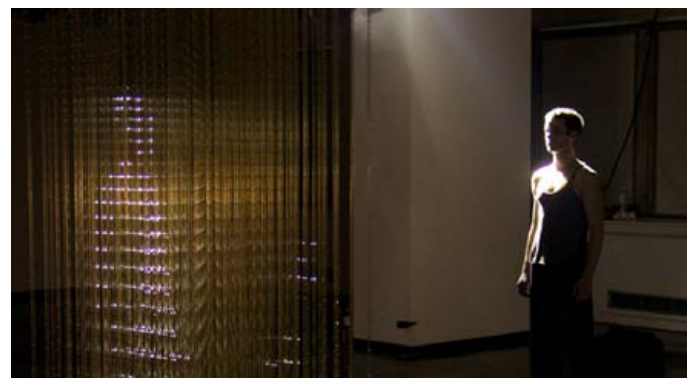

and is composed of aluminium, custom electronics, 3D cameras, LEDs, and brass rods. their performance unified dance,

music and artwork with the human form in an immediate experience for the audience, offering a full introductory sequence to 'future self'.

the interactive work is a study in human movement mirroring interaction in dance, light and sound, while exploring the self - present and future.

it attempts to reveal what it can about one's identity and the relationship which we have with our own self image reflecting and rendering one's movements in light resulting in a three-dimensional 'living' sculpture, derived from the composite gestures of those who surround it; represented in an illuminated presence - another version of themselves.

the project is commissioned and supported by MADE.

Wow !

Michel, Québec 05.11.12

it would be pretty interesting if the dancers weren't even in the same room

dbkii 05.11.12

This is an inversion of Indonesian shadow theatre. Very powerful, kinetic, beautiful. I look forward to more explorations of light as art, directed by human/living gesture that exists in the moment.

random international: fly at moscow biennial

inside a glass vitrine, an abstract representation of a fly is held captive, entrapped by eight cables and controlled by an autonomous algorithm which accurately simulates the observed behavior of real flies.

3

rAndom international: reflex installation

the installation transforms the vitrines into the 'habitat of an organism that represents itself in the form of light'.
